Thanks Ben. I will talk with them, Mike Paul and others regarding the potential for additional dollars to continue the NM nutrient development. I did talk with Shelly Lemon this afternoon regarding the periphyton and associated habitat data. They are and have either (for the most part) collected either EMAP or modified EMAP habitat data for most sites including canopy BUT during the years, 2008 - 2010 it's unclear whether the field sheets were sent to Corvallis for scanning and loading into SWIMS. So, at some future date I will need to bird dog this and resolve.

At the completion of 2010, NMED dropped periphyton data collection at wadeable sites, due to the inconclusive findings of the data assessment and report that I sent you, but continue sampling at the non-wadeable/river sites.
